This two piece set comprises of a rubberised ball representing the Earth (with detailing of the continents and a strong magnet moulded within it to create an invisible exterior magnetic field, similar to that of the Earth) and a hand held magnet called a Magnetic Field Finder (which is a type of 3 dimensional compass). Place the Magnetic Field Finder near to the globe and it tilts and orientates itself to clearly show the strength, direction and position of the magnetic flux anywhere around the Earth Ball. The Magnetic Field Finder is also useful to reveal the 3 dimensional nature of magnetic fields around any Magnet and is a real step up from iron filings sprinkled onto a piece of paper. A really magical way to see and understand the Earth's 3 dimensional Magnetic Field Pattern. Comes complete with a full explanation for the teacher and pupil.

Magnetic Connections Electricity Kit

87210

All electrical circuits required to cover the needs of the National Curriculum Science for Key Stages 1 & 2 are included in this set. All connections are made using transparent wires to show the copper core, bases are clear to show the path of electricity right to the component. Circuits are made using the superb 'Maglead' system where a tiny yet powerful magnet at either end of the lead makes the electrical connection when placed near to the connector. If you are looking for a simple electricity kit that covers the curriculum and guarantees success every time, then look no further. Requires 3 x 'C' cells. The set includes simple Teacher's notes, but we recommend the Teacher's Resource Pack to extend your activities.

Kit Contents:

6 Bases, 2 x MES bulbs and holders, 1 x Festoon bulb, 1 x Buzzer, 1 x Push to Make Switch, 1 x Motor, 10 x Magleads, 2 x Crocodile Clips, Length of Resistance Wire, 3 x Battery Connectors and Teacher's notes. Note: Sheets are copyright free to purchasing establishment.

Make working electrical circuits instantly with these ingenious leads fitted with a tiny powerful magnet at either end. Place near to a battery case and it connects by itself or place next to a batten bulb holder connector and you have your first working circuit. The magnets, which protrude from the ends of the leads, are 4mm in diameter so will work in all of the places that standard banana plugs work, such as power supplies, test meters and crocodile clips but have the advantage of making instant connections when near to steel connectors. Children no longer have to strip, cut or make mechanical fixes and leads can be daisy chained together to extend their length with ease.
